**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1, 2, 4, 6, 7-12, 14, and 16-19 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 1 and 11 prior art fails to teach or make obvious a backlight device and a method of lighting such comprising at least one fluorescent lamp in a substantially dustproof housing; wherein part of the lamp extends outside the housing through a wall that abuts against the lamp in a substantially dust-tight manner, wherein the wall comprises two parallel plates between which a flexible material is arranged.

2. Claim 25 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 25, prior art fails to teach or make obvious a display as previously set forth and further including inner walls comprising two parallel plates sandwiching a flexible material and at least one end of the light source extending into the outer space through the flexible material.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 21-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Hirashiro (JP 2001-283624).

Regarding claim 21, Hirashiro discloses a display (paragraph 1) comprising a housing having a base (bottom of Drawing 11), outer wall (shown but not labeled in Figure 11) and inner walls (59); a first surface supported by at least one of the outer walls and inner walls (drawing 10, item 5 II ), the inner walls separating an inner space (51) and an outer space; and at least one light source (42) having a body located in the inner space and at least one end extending into the outer space though at least one inner wall of the inner walls; wherein the inner space extends from the first surface to the base and completely encloses the body (Drawing 11 illustrates inner space completely surrounding the circumference of the lamp body).

Regarding claim 22-24, Hirashiro further discloses at least one outer wall including at least one opening (34) configured to allow air into the outer space and a fan (Abstract), the one outer wall being substantially perpendicular to an axis of the at least one light source.

***Conclusion***
